TRƯỜNG ĐẠI HỌC FPT

CAPSTONE PROJECT REGISTER

Class: **Duration time**: from 09/2026 To 03/2027

(*) Profession: Software Engineer **Specialty**: SE [x]

(*) Kinds of person make registers: Lecturer [x] Students

1. Register information for supervisor (if have)

No.	Full name	Phone	**E-Mail**	**Title**
Supervisor	Thân Thị Ngọc Vân		vanttn@fpt.edu.vn	Giảng viên

2. Register information for students (if have)

No.	**Full name**	**Student code**	**Phone**	**E-mail**	**Role in Group**
1	Lê Thành Minh Trung	SE183752		trungltmse183752@fpt.edu.vn	Leader
2	Nguyễn Xuân Lộc	SE183782		locnxse183782@fpt.edu.vn	Member
3	Trần Võ Quang Duy	SE182146		duytvqse182146@fpt.edu.vn	Member
4	Võ Minh Luân	SE182794		luanvmse182794@fpt.edu.vn	Member
5					

3. Register content of Capstone Project

(*) 3.1. Capstone Project name:

3.1.1. English: ***CampusStay FPT – Dormitory Registration and Room-Scheduling Management System for FPT University's Tân Uyên Campus, Bình Dương***

3.1.2. Vietnamese: ***CampusStay FPT – Hệ thống quản lý đăng ký ký túc xá và sắp xếp phòng tại cơ sở Tân Uyên (Bình Dương) của Đại học FPT.***

(*) 3.2. Main proposal content (including result and product)

a) Context:

The FPT Education Complex in Thái Hòa Ward, Tân Uyên (Bình Dương, part of Ho Chi Minh City since the 2025 provincial merger) broke ground on 18 June 2025 on a site of over 84,000 m² with roughly 130,000 m² of floor area, including lecture halls, dormitories, multi-functional areas and technology learning spaces, and is planned to serve up to 4,000 learners. As a brand-new campus it has no dormitory system yet: no legacy process to migrate, but nothing to

run registration, room and bed assignment, payments, Term transitions and maintenance once the dormitories open.

Because the dormitory is not operating yet, the requirements are based on (1) how FPT University's operating dormitories work (registration per Term, Deposit and Balance, room types and classes, Block staff, check-in and check-out), (2) the Ministry of Education's dormitory regulation (Circular 27/2011/TT-BGDĐT) and the practice of large Vietnamese student dormitories such as VNU-HCM's, and (3) the proven scope of student-housing platforms such as StarRez. Every business value (prices, deposit percentage, windows, eligibility, matching criteria, refund and termination rules, time limits) is configuration, so the system can follow the dormitory's real rules when it opens.

CampusStay FPT is not a replacement for FPT University's student information system: the student list and the enrolled list of each Term are imported from files and reconciled. It owns the dormitory workflow: registration periods, Applications, assignment, Invoices and payment confirmation, residence (door codes, check-in and check-out), Term transitions of continuing residents, maintenance and inspections, notifications and reports. It does not process tuition fees.

b) Proposed Solutions:

A web app for students (phone-first) and for the dormitory's Staff, Managers and Administrator, an Android app for students, and one REST API with a PostgreSQL database. Students choose a Room Type and a Room Class; a rule-based batch engine places them fairly. Payments are VietQR transfers to the dormitory's account that students claim and Managers confirm.

System actors:

1. Student (applicant and resident)
    - Apply for a Term, invite a roommate (2-bed rooms), pay by VietQR and claim the transfer
    - See the Room, door code, check-in pass and Invoices; report Maintenance Requests
    - In the requests window: extend the stay, end it, ask for a room change, a swap or a Room Class change
2. Staff (per Block)
    - Run the check-in and check-out desk, meter readings, door codes, furniture and inspections
    - Handle Maintenance Requests and decide the next-Term requests of the Block
3. Manager (dormitory manager, every Block; added after Review 1)
    - Request registration periods; verify student accounts; import and reconcile student lists
    - Review Applications, run and approve the assignment, confirm payments, decide late check-ins, terminations and refunds
    - Follow dashboards, reports and overdue requests; set routing rules, time limits and Block settings; manage Staff accounts
4. Administrator
    - Build and publish Terms from the Managers' requests; configure prices, rules, users and notification texts

c) Functional Requirements:

Student. The Student shall be able to:

- Sign in with a password or the FPT Google account; a new Google account is verified by a Manager before applying
- Apply for a Term, with eligibility checked, choosing Room Type, Room Class, roommate (2-bed) and *Gia hạn* (number of Terms), and accept the house rules
- Pay the Deposit, Balance, next-Term fee and Utility Invoices by VietQR transfer and claim the transfer
- See the assigned Room and Bed, roommates, furniture, the door code (once paid and from the check-in start) and the check-in pass
- Ask for a late check-in; answer a Round-2 offer
- Report Maintenance Requests and follow them; extend or end the stay; ask for a next-Term room change, swap or Room Class change
- Receive notifications in the app, by push (Android) and by email

Dormitory Staff. The Staff shall be able to:

- Check students in and out (hand-over, meter reading, damage per furniture item, Utility Deposit settlement)
- Set and confirm door codes, manage furniture and the Block store, run inspections
- Enter or import meter readings and close the month (Utility Invoices split by days lived)
- Handle Maintenance Requests within their time limits; decide next-Term requests; move residents for operational reasons
- Post announcements to the residents of their Blocks

Manager. The Manager shall be able to:

- Request registration periods; verify accounts; import the student list; reconcile the enrolled list
- Review Applications; run the batch assignment, resolve conflicts and approve it; run Round 2
- Confirm or reject payment claims; issue next-Term fees; decide refunds, late check-ins and terminations
- Set routing rules, time limits, Block settings, Room Classes by Term and inspection schedules; manage Staff accounts
- Follow dashboards, the Term dashboard, reports and overdue requests; export every list

Administrator. The Administrator shall be able to:

- Build and publish Terms (timeline, Rooms, prices, rules, information) from the Managers' requests
- Configure Room Types, Room Classes, fees, Utility, eligibility, priority groups, matching criteria, deadlines, refunds and stay rules
- Manage Blocks, Rooms, furniture types, users and roles, notification texts and email campaigns; read the Audit Log

Assignment engine and automation. The system shall automatically:

- Place approved students by gender, Room Type and Class, roommate pairs, priority groups and matching criteria; flag conflicts; give the same result for the same input
- Expire unpaid Deposits, forfeit unpaid Balances, release door codes, run the requests-window milestones, warn and terminate for Utility debt, escalate overdue requests and send reminders

d) Non-Functional Requirements:

- Security and privacy: access by role and Block; passwords hashed, door codes encrypted; personal data processed according to the Personal Data Protection Law 91/2025/QH15.
- Performance and capacity: p95 response ≤ 1 s with 200 concurrent users on 3,680 Beds and 6,200 students.
- Integrity: a Bed is never given twice in a Term; money of an Invoice never changes once issued.
- Configurability: Terms, prices, rules and time limits change without a new release.
- Usability: Vietnamese and English; student portal usable on phones.
- Deployability: every change that passes its tests is deployed automatically; rollback in minutes.

e) Theory & Practical:

Documents: Reports 1–7. Technologies:

- React (web app for all roles), Kotlin with Jetpack Compose (Android app for students)
- Spring Boot (Java 21) REST API, PostgreSQL with Flyway migrations
- A rule-based batch room-assignment engine
- Firebase Cloud Messaging, SMTP email, in-app notifications
- VietQR transfer images; Google sign-in for FPT accounts
- Docker, GitHub Actions CI/CD, Vercel and Azure hosting

f) Products (Expected Deliverables):

A web app for students and for the dormitory's Staff, Managers and Administrator; an Android app for students; the REST API with its database scripts and automated tests; Reports 1–7.

g) Proposed Tasks:

- P1 Literature review: student-housing platforms, Vietnamese dormitory practice and regulation, FPT's dormitory model.
- P2 Requirement analysis: registration, assignment, payments, residence, Term transition, maintenance and Utility workflows.
- P3 System design: architecture, database, REST API, state machines, the assignment engine.
- P4 Registration and payments: registration periods, Applications, assignment, VietQR claims and confirmation.
- P5 Residence and operations: door codes, desk, Term transition, maintenance, Utility and debt.
- P6 Clients and reports: web app for four roles, Android app, dashboards and exports.
- P7 Testing and documentation: automated and system tests, user acceptance, reports and demonstration.

4. Other comments (propose all relative things if have):
Version 2.0 proposed for Review 2 (31/10/2026). The changes from version 1.0 and their reasons are listed in the attached Record of Changes (BM03).

Registration Form – Record of Changes

1. Project Information

Project code	FA26SE260
Project name	CampusStay FPT – Dormitory Registration and Room-Scheduling Management System for FPT University's Tân Uyên Campus, Binh Duong
Team	CampusStay FPT — Lê Thành Minh Trung (Leader), Nguyễn Xuân Lộc, Trần Võ Quang Duy, Võ Minh Luân
Supervisor	Thân Thị Ngọc Vân
Current registration version	1.0 (28/08/2026)
Proposed version	2.0 (proposed for Review 2, 31/10/2026)
Version	2.0
Date	28/10/2026

2. Changes

☐ No changes to the current registration form

No.	Section	Current content	Proposed content	Reason	Proposed by
1	2. Students	No members listed	4 members with student codes, emails and roles (phones omitted)	Team formed for the capstone	Lê Thành Minh Trung
2	3.2 a) Context	Tân Uyên City, Bình Dương; scope adapted from StarRez	Tân Uyên, part of Ho Chi Minh City since 2025; basis of the requirements: FPT's operating dormitories, Circular 27/2011/TT-BGDĐT, VNU-HCM practice; every business value configurable	Review 1 feedback (Q1–Q3: how to specify a dormitory that is not operating yet); 2025 administrative merger	Lê Thành Minh Trung
3	3.2 b) Actors	Student, Dormitory Staff / Residence Life Officer, Administrator	Student; Staff per Block; Manager for every Block (reports, statistics, decisions, Block management); Administrator	Review 1 feedback (Q4: add the Manager role)	Lê Thành Minh Trung

No.	Section	Current content	Proposed content	Reason	Proposed by
4	3.2 c) Student: room selection	Browse and select a room/bed; search and request a roommate	Choose Room Type and Room Class; invite a roommate for 2-bed rooms; the batch engine assigns the Bed	Iteration 1: fair placement with gender and Block rules and no race for a Bed; the complexity moves into the engine	Lê Thành Minh Trung
5	3.2 c) Student: contract, check-in/out	Digital housing contract; self check-in/out with a room-condition report	Consent to the house rules recorded; desk check-in with a QR pass; check-out with damage per furniture item; door codes released after payment	No legal e-signature provider; keys and doors need Staff at the desk (Iteration 1)	Nguyễn Xuân Lộc
6	3.2 c) Payment	Pay via a VietQR-compatible payment gateway	VietQR transfer to the dormitory account; the student claims it, a Manager confirms or rejects it	Constraint from partners: no bank API or gateway contract for a student project	Lê Thành Minh Trung
7	3.2 c) Communication	In-app notification, email or SMS	In-app notifications, push to the Android app, email; announcements board	SMS gateway cost; push and email cover the cases	Võ Minh Luân
8	3.2 c) Added functions	—	Registration-period requests and the Term wizard; Term transition (Gia hạn, requests window M2–M7, next-Term fees); late check-in; Round 2; monthly Utility billing and debt; door codes; furniture	Iteration 1: a dormitory runs across Terms; these add business complexity	Nguyễn Xuân Lộc
9	3.2 c) SIS integration, forecasting	Integrate with the SIS; forecast occupancy and vacancy	Import of the student list and reconciliation of the enrolled list per Term; occupancy and Term dashboards	Constraint from data: the SIS is not accessible; a new campus has no history to forecast from	Lê Thành Minh Trung
10	3.2 d) Non-functional requirements	Decree 13/2023/NĐ-CP; capacity 4,000 learners; SIS and gateway interoperability	Law 91/2025/QH15; measurable NFRs: p95 ≤ 1 s at 200 users, integrity, availability, two languages, deployability	The Law replaces the Decree from 01/01/2026; NFRs need metric, threshold and method	Võ Minh Luân
11	3.2 e), f) Technologies, products	ReactJS or Flutter/React Native; Spring Boot or Node.js; mobile/web app, staff web app, admin dashboard	React web app for all roles; Android app (Kotlin, Jetpack Compose) for students; Spring Boot API; Docker, GitHub Actions, Vercel, Azure	Team skills; native push and Google sign-in on Android; one web app for all back-office roles	Trần Võ Quang Duy

No.	Section	Current content	Proposed content	Reason	Proposed by
12	3.2 g) Proposed tasks	P1–P7 around room selection and a payment gateway	P1–P7 updated to the scope above	Follows changes 4–11	Lê Thành Minh Trung

3. Decision at Review 2 (completed by reviewers)

No.	Decision (Accepted / Adjusted / Rejected)	Reviewer note
